DDR4 memory population guidelines

For detailed memory configuration rules and guidelines, please use the Online DDR4 Memory Configuration Tool: <http://h22195.www2.hp.com/MemoryTool/Home/SelectServer>.

Memory Population guidelines

General Memory Population Rules and Guidelines:

- . The HPE ProLiant ML10 Gen9 Server has four memory slots
- . There are two channels per server with two DIMM slots per channel
- . Memory channel consists of the two (2) DIMMs that are closest to the processor
- . Memory channel consists of the two (2) DIMMs that are furthest from the processor
- . Support for single/dual-rank 2133 MT/s ECC UDIMM (unbuffered DIMMS)
- . The server supports up to 64 GB (4 x 16-GB) for Unbuffered DIMMs
- . When only one processor is installed, install DIMMs in sequential alphabetic order: 3C, 1D, 4A, 2B
- . No support for LRDIMMs; RDIMMs; Non-ECC UDIMMs
- . Do not install DIMMs if the processor is not installed
- . Populate DIMMs from heaviest load (double-rank) to lightest load (single-rank)
- . DIMMs should be populated starting farthest from the processor on each channel
- . Non-ECC DIMMs are not supported
- . Always use HPE qualified DIMMs

End-of-life Management and Recycling

Hewlett Packard Enterprise offers end-of-life product return, trade-in, and recycling programs, in many geographic areas, for our products. Products returned to Hewlett Packard Enterprise will be recycled, recovered or disposed of in a responsible manner.

<http://www.hpe.com/recycle>

The EU WEEE directive (2002/95/EC) requires manufacturers to provide treatment information for each product type for use by treatment facilities. This information (product disassembly instructions) is posted on the Hewlett Packard Enterprise web site. These instructions may be used by recyclers and other WEEE treatment facilities as well as Hewlett Packard Enterprise OEM customers who integrate and re-sell Hewlett Packard Enterprise equipment.
